2/3 Enriched Sewater Medium Recipe

Directions

For marine algae that require salinities at 10 ppt, the basic Enriched Sewater Medium is combined with sterile distilled water prior to inoculating the new culture, such that 2/3 Enriched Sewater Medium combines Enriched Sewater Medium and sterile distilled water 2:1.

For 1 L Total
1. Combine components.
2. Store at refrigerator temperature.

#	Component	Amount	Stock Solution Concentration	Final Concentration
1	Enriched Seawater Medium	665 mL		
2	sterile dH_2O	335 mL
