

**Table 8.1**

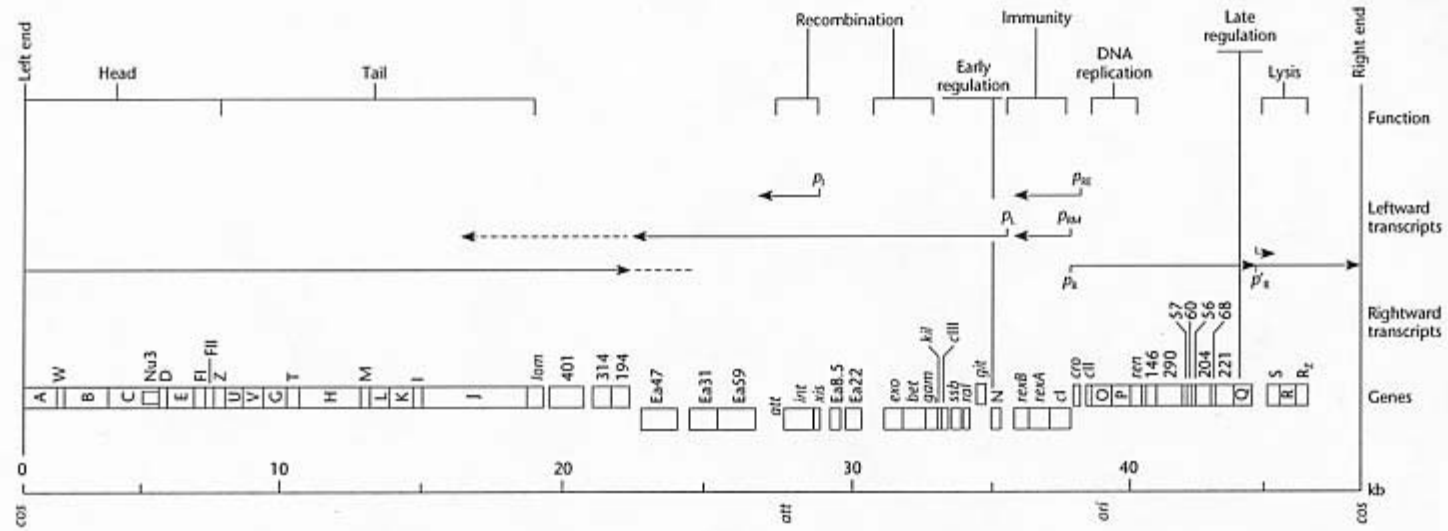

<b>TABLE 8.1</b> Some $\lambda$ gene products and their function	
<b>Gene product</b>	<b>Function</b>
N	Antitermination protein acting at $t_L^1$ , $t_R^1$ , and $t_R^2$
O, P	Initiation of $\lambda$ DNA replication
Q	Antitermination protein acting at $t_R'$
CI	Repressor; protein inhibitor of transcription from $p_L$ and $p_R$
CII	Activator of transcription of <i>ci</i> and <i>int</i>
CIII	Stabilizer of CII
Cro	Protein inhibitor of CI synthesis
Gam	Protein required for rolling-circle replication
Red	Proteins involved in $\lambda$ recombination
Int	Integrase; protein required for site-specific recombination with chromosome
Xis	Excisase; protein forms complex with Int and functions in excision of prophage

Table 8.2

TABLE 8.2 Some sites involved in phage $\lambda$ transcription and replication <sup>a</sup>	
Sites	Function
$p_L$	Left promoter
$p_R, p_R'$	Right promoters
$o_L$	Operator for leftward transcription; binding sites for CI and Cro repressors
$o_R$	Operator for rightward transcription; binding sites for CI and Cro repressors
$t_L^1, t_L^2$	Termination sites of leftward transcription
$t_R^1, t_R^2, t_R'$	Termination sites of rightward transcription
$nutL$	N utilization site for leftward transcribing RNA Pol (i.e., the site at which N binds to RNA Pol)
$nutR$	N utilization site for rightward transcribing RNA Pol
$qut$	Q utilization site for antitermination at $p_R'$
$p_{RE}$	Promoter for repressor establishment; activated by CII
$p_{RM}$	Promoter for repressor maintenance; activated by CI
$p_i$	Promoter for <i>int</i> transcription; activated by CII
POP'	Attachment site ( <i>att</i> $\lambda$ )
<i>cos</i>	Cohesive ends of $\lambda$ genome (12-bp single-stranded ends in linear genome anneal to form circular genome after infection)

<sup>a</sup>In  $\lambda$ , essential genes have single-letter names while nonessential genes have more conventional three-letter names.
